A versatile, multilayer modular switching platform for mid-range Enterprise applications, delivering highly secure, resilient access to business resources.

OVERVIEW

The 3Com® Switch 7750 Family of modular LAN switches provides intelligent, multilayer switching and routing for enterprises and mid-market businesses, enabling end-to-end network connectivity with advanced traffic management. Providing unparalleled investment protection with high scalability and performance, advanced security and granular network control, the Switch 7750 Family delivers wirespeed Fast Ethernet and Gigabit Ethernet connectivity with 10-Gigabit Ethernet uplinks in a highly flexible and resilient modular platform.

The Switch 7750 Family is perfectly suited to networking environments requiring non-stop access to critical business applications. Three chassis models are available, providing a range of port densities and media flexibility:

- 3Com Switch 7758—8-slot chassis with two slots for switch fabrics (primary and redundant) and six slots supporting any combination of switching I/O modules, up to 292 10/100/1000 or 288 10/100 ports
- 3Com Switch 7757—7-slot chassis with one slot for the switch fabric and six slots supporting any combination of switching I/O modules, up to 292 10/100/1000 or 288 10/100 ports
- 3Com Switch 7754—4-slot chassis with one slot for the switch fabric and three slots supporting any combination of switching I/O modules, up to 148 10/100/1000 or 144 10/100 ports.

All chassis models share the same high-performance, scalable modular architecture—scaling up to 240 Gigabits per second (Gbps) system bandwidth and 179 Million packets per second (Mpps) forwarding performance—for maximum long term investment protection.
KEY BENEFITS

INTELLIGENT ENTERPRISE INFRASTRUCTURE
Enterprise network infrastructure is evolving dramatically, from the core to the edge of the network, and the 3Com Switch 7750 is designed to meet the greater demands being placed on the entire network system to deliver:

• Highly intelligent, non-stop transport of data and access to information resources
• Guaranteed quality of service (QoS) for mission critical business applications, including Voice over IP (VoIP), storage and video
• Comprehensive security for network access control, encryption and protection of corporate resources
• Unprecedented levels of management visibility and granular control
• An open, standards-based architecture to enable seamless growth and future investment without proprietary lock-ins

RESILIENT ARCHITECTURE FOR BUSINESS CONTINUITY
Featuring a resilient and flexible modular architecture, the Switch 7750 Family enhances business continuity by ensuring availability of network resources and critical business applications—including data, voice and video. All critical system components including power supplies, cooling fans and switch fabrics are redundant* and hot-swappable, minimizing the business impact in the unlikely event a component should fail.

Changes in network topology due to device or link failures can lead to disruption of service for critical business applications. Rapid recovery from such topology changes is ensured with features such as Multiple Spanning Tree Protocol (MSTP), Rapid Spanning Tree Protocol (RSTP), Open Shortest Path First (OSPF) routing and Virtual Router Redundancy Protocol (VRRP).

APPLICATION CONVERGENCE: QOS AND POWER OVER ETHERNET
Real-time applications such as VoIP demand high QoS and differentiated service levels to function properly. Based on the same proven operating system as the flagship 3Com Switch 8800 Family, the 3Com Switch 7750 delivers robust QoS and advanced traffic management features to ensure critical applications are prioritized and serviced as the needs of the organization dictate.

Additionally, the Switch 7750 supports industry-standard IEEE 802.3af Power over Ethernet (PoE) to provide both electrical power and network connectivity to PoE-capable devices, such as IP telephones and wireless access points, making the Switch 7750 ideal for large-scale enterprise edge deployment.

PoE simplifies network deployment by eliminating the need for separate data and power infrastructures, significantly reducing installation and maintenance costs. PoE also provides greater flexibility for moves, adds and changes on the network. Powered network devices can be deployed or relocated anywhere an Ethernet connection is available without requiring a dedicated power outlet.

* Redundant fabric available on Switch 7758 only.
ENTERPRISE-WIDE SECURITY

Security is paramount in today’s enterprise and as dependency on information technology continues to rise, so does the need for highly secure IT systems and infrastructures. The 3Com Switch 7750 features advanced security capabilities, including user and device authentication, policy-based access controls, encrypted system management access and quarantine enforcement for containment of vulnerabilities and deliberate attacks.

The Switch 7750 ensures secure network access using standard IEEE 802.1X network login with RADIUS Authenticated Device Access (RADA). RADIUS support enables user authentication, while the switch is also able to authenticate attached devices (printers, for example) via their MAC address for an additional level of endpoint security. Port- and VLAN-based Access Control Lists (ACLs) and dynamic traffic filtering capabilities can be deployed to further control access to network resources.

Additional security measures—Secure Shell version 2 (SSH v2) and SNMP v3 with authentication and encryption of network management traffic—are enforced when accessing switch management utilities.

The Switch 7750 Family functions as an integral part of the 3Com Quarantine Protection solution to automate containment of security threats on the enterprise network. Quarantine Protection integrates the industry-leading TippingPoint™ Intrusion Prevention System with switch-based endpoint enforcement at the network edge.

SCALABLE PERFORMANCE

With up to 240 Gbps of system bandwidth and wirespeed switching capacity, the Switch 7750 provides exceptional scalability for Enterprise distribution and edge environments and for core networks of mid-market businesses. Connectivity and media options can be tailored to each environment with a wide selection of switching modules, scaling up to 292 Gigabit ports or 288 Fast Ethernet ports in a single chassis. 10-Gigabit Ethernet uplink modules allow ultra-high-bandwidth links for inter-switch backbone connections. The flexible design of the Switch 7750 allows for any combination of switching modules to be used in a single system, allowing easy expansion of network capacity with a wide selection of standard interface types for twisted pair (copper) and fiber media.

A 96 Gbps switching fabric provides high-performance switching, routing and centralized management in the Switch 7750. In addition, individual switching I/O modules provide on-board local switching, maximizing system performance and application response times, for an aggregate Layer 2/3 switching capacity of up to 179 Mpps.

Hardware-based routing of multicast traffic enhances performance and reduces latency (delay) for multicast applications, enhancing performance for real-time applications like streaming audio and video.

Standards-based link aggregation (via IEEE 802.3ad) allows scalable, high-bandwidth interconnectivity between network devices, with the ability to aggregate multiple Gigabit links together as a single trunk. Link aggregation of Gigabit ports is supported across fabric modules within the Switch 7758 chassis (when configured with redundant fabrics) for enhanced network availability.
KEY BENEFITS

PRIORITIZATION AND TRAFFIC MANAGEMENT

Eight priority queues per port enable standard IEEE 802.1p Class of Service/Quality of Service (CoS/QoS). Protocol filtering and bandwidth rate limiting capabilities allow the Switch 7750 to enforce port-based controls for efficient use of network resources and prioritization of business-critical or time-sensitive applications, including Voice over IP.

For example, protocols associated with key business applications can receive prioritized, high-bandwidth service; while other protocols that may be associated with non-critical (or even undesirable) applications can receive lower priority and/or bandwidth resources, or be blocked completely.

STANDARDS BASED INTEROPERABILITY AND INVESTMENT PROTECTION

Enterprises today rely on open standards-based technology solutions to enable interoperability among new and existing systems and to ensure that today’s investments will continue to provide value well into the future without being locked-in to a particular vendor’s products or technology.

3Com has designed the Switch 7750 with an open architecture, facilitating seamless growth and migration based on widely accepted international standards, free from costly lock-ins and the restrictions of proprietary approaches.

3Com’s standards-based design philosophy—inherent in the Switch 7750 and all other 3Com products—provides investment protection as well as the flexibility to deploy best-in-class technology solutions which leverage industry standards.

ENTERPRISE CLASS MANAGEMENT AND CONTROL

The Switch 7750 provides independent paths for data and management. A dedicated data channel provides high-speed data switching and packet forwarding, while a separate management channel provides control, monitoring, route learning and distribution.

Comprehensive management capabilities provide enterprise-wide visibility and control to IT staff for configuration, network monitoring and advanced troubleshooting.

Management features are accessible via an intuitive command line interface (CLI), as well as by SNMP, with hierarchical access controls and password protection for secure management access. Additional management security is provided through user authentication and data encryption capabilities of SNMP v3 and SSH v2, further helping prevent unauthorized access or snooping of management traffic.
FEATURES

Highly flexible, resilient architecture for end-to-end enterprise deployment in the core, data center, distribution layer and network edge.

High-density multilayer switching for Fast Ethernet, Gigabit Ethernet and 10-Gigabit Ethernet.

Up to 288 Fast Ethernet or 292 Gigabit Ethernet ports per system.

10-Gigabit uplinks for ultra-high-speed backbone connectivity.

Up to 240 Gbps system bandwidth; up to 179 Mpps switching capacity.

Advanced traffic prioritization and routing of multicast traffic in hardware for convergent applications including VoIP, streaming audio and video.

Virtually non-stop operation with redundant power supplies, fans and switch fabrics*, as well as hot-swappable switching I/O modules.

Robust network access control and enterprise-wide security via standards-based IEEE 802.1X, RADIUS Authenticated Device Access (RADA), and advanced Access Control Lists; authentication and encryption of management traffic via SSH v2 and SNMP v3.

Industry-standard PoE to power IP phones, wireless access points and other devices; reduces implementation and maintenance costs.

Unified management and administration with a common operating system and centralized control available via 3Com Enterprise Management Suite.

Granular QoS and traffic management for enhanced availability and performance of critical business applications.

Extensive L2/3/4 switching and routing capability, including advanced features like IS-IS † and BGP-4 †, applicable in very large enterprises. IPX routing for enhanced support of legacy environments.

All information in this section is relevant to all current members of the 3Com Switch 7750 Family, unless stated otherwise.

**CAPACITIES AND PERFORMANCE**

3Com Switch 7758 8-slot:
- 2 switch fabric and 6 payload slots
- Backplane: 96 Gbps
- Max. system bandwidth: 240 Gbps (full duplex)
- Max. aggregate system throughput: 179 Mbps

3Com Switch 7757 7-slot:
- 1 switch fabric and 6 payload slots
- Backplane: 96 Gbps
- Max. system bandwidth: 240 Gbps (full duplex)
- Max. aggregate system throughput: 179 Mbps

3Com Switch 7754 4-slot:
- 1 switch fabric and 3 payload slots
- Backplane: 48 Gbps
- Max. system bandwidth: 120 Gbps (full duplex)
- Max. aggregate system throughput: 89 Mbps

All models:
- Layer 3: 1,024 IP interfaces, IP routing at 48 Mpps, 64k IP routing entries

**LAYER 2 SWITCHING**

16K MAC addresses

- 5K static MAC addresses
- Modules forwarding (delay <10µs)
- 9K jumbo frame support
- 4,096 VLANs (IEEE 802.1Q)
- Port-based (IEEE 802.1Q) and
- protocol-based (IEEE 802.1v) VLANs
- GARP VLAN Registration Protocol (GVRP)
- IP v6 tunneling using protocol-based VLANs

IEEE 802.3ad Link Aggregation Control Protocol (LACP)
- Supports maximum of 64 link aggregation groups
- Auto-negotiation of port speed and duplex

IEEE 802.3x full-duplex flow control
- Back pressure flow control for half-duplex
- Supports broadcast storm suppression

IEEE 802.1D Spanning Tree Protocol (STP)

IEEE 802.1w Rapid Spanning Tree Protocol (RSTP)

IEEE 802.1s Multiple Spanning Tree Protocol instances (MSTP)

Bridge Protocol Data Unit (BPDU) protection

**LAYER 3 SWITCHING**

Hardware-based routing

- 64K dynamic routes
- 8K static routes
- Dynamic/Static Address Resolution Protocol (ARP) entries

Routing Information Protocol (RIP),
- v1 and v2; supports Split Horizons
- Open Shortest Path First (OSPF),
- v1 and v2; 50 areas
- Equal Cost Multi-Path (ECMP) Routing
- Border Gateway Protocol 4 (BGP)
- Intra-Domain Intermediate System to Intermediate System (IS-IS)
- Hardware-based multicast routing for wirespeed performance

1K multicast routes

Multicast Source Discovery Protocol (MSDP)
- Multicast rate limiting
- Internet Group Management Protocol (IGMP) snooping on Layer 2 interfaces
- IGMP v1 and v2
- GARP Multicast Registration Protocol (GMRP)

Protocol Independent Multicast-Dense Mode (PIM-DM)

Protocol Independent Multicast-Sparse Mode (PIM-SM)

Multicast VLAN

Dynamic Host Configuration Protocol relay (DHCP relay)

DHCP client and server
- TCP/IP protocol stack; ARP
- Virtual Router Redundancy Protocol (VRRP)

**CONVERGENCE**

8 hardware queues per port
- Flow-based QoS profiles
- Ingress and egress

Remark of packets based on priority:
- Auto identification and classification of IP telephones
- Selectable prioritization
- DiffServ Code Point (DSCP)
- Type of Service (ToS)
- IEEE 802.1p Class of Service (CoS)
- IP precedence
- Local precedence: physical port, source/destination MAC address, VLAN information, Ethernet type, Layer 3 protocol, source/destination IP address, DSCP, Datagram type, IP Layer 4 protocol, IP Layer 4 ports

Flow-based bandwidth management
- Flows identified through Access Control Lists (ACLs)

Minimum and maximum thresholds:
- 64kbit/s increments, 100 traffic classes per port
- Queuing algorithms
- Strict Priority Queuing (SPQ)

**SECURITY**

IEEE 802.1X Network login user authentication

Local authentication and
RADIUS/AAA authentication

RADIUS Authenticated Device Access (RADA):
- authenticates devices based on MAC address against RADIUS
- server or local database:
- assign VLAN ID and ACL through RADIUS

DHCP snooping

Wirespeed packet filtering in hardware

Supports a maximum of 1,536 ACL rules

ACLs filter at Layers 2, 3 and 4:
- Physical port
- Source/destination MAC address
- VLAN information
- Ethernet type
- Layer 3 protocol
- Source/destination IP address
- DSCP
- Datagram type
- IP Layer 4 protocol
- IP Layer 4 ports

Anti DoS (Denial of Service) attack
via BFDU route guard, HDHC server address check and SYN packet attack protection

Guest VLAN to quarantine
unauthorized users or users that fail to re-authenticate via RADIUS

Multiple authentication server realm definitions

Spanning Tree root bridge protection
SYN packet attack protection

Telnet protection

Switch protocol security:
- MD5 cipher-text authentication and clear-text authentication for OSPF v2 and RIPv2 packets and SNMP v3 traffic

IEEE 802.1X user authentication of switch management on switch Telnet sessions

Hierarchical management and password protection for management interface

SNMP v3 encryption

SSH v2 management session encryption
**SPECIFICATIONS (CONTINUED)**

**MANAGEMENT**

Command Line Interface (CLI) configuration mode
Configuration via the control console port
Local/remote configuration via Telnet
Remote configuration via modem dial-up
System configuration with SNMP v1, 2 and 3
Secure Shell Version 2 (SSH v2) for management access

Comprehensive statistics, including ACL/QoS and IP interface
Remote Monitoring (RMON) groups statistics, history, alarm and events
System log
Syslog
Detailed alarm and debug information
Front panel indicators for port and unit status information
Hierarchical alarms; alarm generation and filtering
Supports ping and traceroute
Configuration file for backup and restore, stored in non-volatile memory; multiple configuration files available
Supports multiple software images and bank swap, stored in non-volatile memory
Backup and restore of software images
Network Time Protocol (NTP)
Device Link Detection Protocol (DLDP)
IGMP proxy
DHCP server
DNS client
Port mirroring
Remote port mirroring
Flow-based bandwidth management, with flows identified through Access Control Lists (ACLs)
Minimum and maximum thresholds: 64Kbit/s increments, 128 traffic classes per port, 512 flows per class
Random Early Detect/Discard (RED) queue handling
Queuing algorithms
Strict priority queuing
WRR (Weighted Round Robin) provided through bandwidth management
DHCP Relay and UDP Helper

3Com Management Applications:
• 3Com Enterprise Management Suite for flexible, extensible management in advanced enterprise IT environments
• 3Com Network Director for comprehensive, turn-key network management for the enterprise
• 3Com Network Supervisor for basic, turn-key network management for mid-market businesses

**AVAILABLE SWITCH FABRICS**

96 Gbps Switch Fabric
Chassis model compatibility: Switch 7758, 7757 and 7754 and Switch 7708R and Switch 7700 7-slot and 4-slot legacy models
Connections: 4 SFP Gigabit ports (SFPs sold separately)

**CONNECTIVITY**

Mix and match in available payload slots:
- 48-port 10BASE-T/100BASE-TX
- 48-port 1000BASE-X (SFP)
- 48-port 10/100/1000BASE-T & 12-port 1000BASE-X (SFP)
- 20-port 1000BASE-X (SFP)
- 48-Port 10BASE-FX (SFP)
- 1-port 10GBASE-X (XENPAK)

**DIMENSIONS**

Switch 7758 8-slot:
- Height: 51.9 cm (20.4 in); width: 43.6 cm (17.2 in); depth: 48.0 cm (18.9 in)
- Weight (fully loaded chassis): 80 kg (176 lbs)

Switch 7757 7-slot:
- Height: 48.6 cm (19.1 in); width: 43.6 cm (17.2 in); depth: 48.0 cm (18.9 in)
- Weight (fully loaded chassis): 70 kg (154 lbs)

Switch 7754 4-slot:
- Height: 35.2 cm (13.8 in); width: 43.6 cm (17.2 in); depth: 48.0 cm (18.9 in)
- Weight (fully loaded chassis): 50 kg (110 lbs)

**SWITCH POWER SUPPLY**

550 W AC Power Supply; dual power input connections
Input voltage: 100-240 VAC
Operating frequency: 47-63 Hz
Maximum current: 15A at 110 VAC; 7A at 200 VAC
Maximum output power: 460 W

**ENVIRONMENTAL**

Operating temperature: 0° to 40°C (32° to 104°F)
Operating humidity: 5% to 85% non-condensing
Storage temperature: -40° to 70°C (-40° to 158°F)
Storage humidity: 10% to 90% non-condensing
Standard: EN 60068 (IEC 68) compliant

**MTBF**

Switch 7750 96 Gbps Switch Fabric (3C16886): 46 years (405,000 hours)
Switch 7750/7700 20-port 100BASE-X SFP (3C16862A): 68 years (594,000 hours)
Switch 7750/7700 20-port 10/100BASE-T (3C16863A): 59 years (519,000 hours)
Switch 7750/7700 1-port 10GBASE-X XENPAK (3C16875A): 61 years (539,000 hours)
Switch 7750/7700 48-port 10/100BASE-T (3C16888): 48 years (418,000 hours)
Switch 7750/7700 48-port 10/100BASE-T (3C16889): 48 years (421,000 hours)
Switch 7750 48-port 10/100BASE-T PoE (3C16890): 39 years (342,000 hours)
Switch 7750/7700 48-port 10/100BASE-T PoE (3C16891): 43 years (389,000 hours)
Switch 7750/7700 48-port 100BASE-T (3C16891S): 74 years (653,000 hours)
Switch 7750/7700 4-port 10/100BASE-T & 12-port 1000BASE-X SFP (3C16891A): 72 years (628,000 hours)
Switch 7750/7700 12-port 10/100BASE-T & 4-port 1000BASE-X SFP (3C16891B): 66 years (576,000 hours)
Switch 7750 External PoE Power Rack (3C16883): 18 years (158,000 hours)
Switch 7750/8800 PoE Power Supply Unit (3C16884): 43 years (375,000 hours)

**ENVIRONMENTAL**

Input voltage: 100-240 VAC
Operating frequency: 47-63 Hz
Maximum current: 15A at 110 VAC; 7A at 200 VAC
Maximum output power: 460 W

1 SNMP v3 and SSH v2 encryption features are available in the Basic Software with Encryption and Advanced Feature Software versions only.

SYSTEM SOFTWARE OPTIONS

Basic Software
Standard software version for Switch 7750, pre-loaded on Switch Fabric

Basic Software with Encryption
Includes all features of the Basic Software plus SNMP v3 and SSH v2 encryption
Available as a free download:
www.3com.com/software_7750

Advanced Feature Software
Includes all features of the Basic Software with Encryption plus:
- BGP4 (WAN routing protocol)
- IS-IS (Large-scale WAN routing protocol)
Ordered separately

WARRANTY

Limited Hardware Warranty for 1 year
Limited Software Warranty for 90 days
90 days of telephone technical support
Refer to www.3com.com/warranty for details.

‡ SNMP v3 and SSH v2 encryption features are available in the Basic Software with Encryption and Advanced Feature Software versions only.
